Drupa 2012 – A huge success for the Hönle Group

Also in 2012 Drupa has proofed itself a true magnet to the international printing industry. Though less vistors attended the show than four years ago, those who had decided to come were very interested in Hönle Group products showed a great readiness to invest. “We had better customer contacts than ever before,” confirms Dieter Stirner, sales director at Dr. Hönle AG.

In addition to the **Hönle Group’s worldwide well-established UV and IR/TL curing systems** their innovative new products appealed very much to the customers. For example the new Eltosch IR/TL drying system **Eco Power Dry**, which at Drupa was awarded with the **BG-certificate for „Energy-minimized printing process “**. Or the enlargement of the well-established Hönle **PureUV LED Powerline series**, which makes LED curing very interesting for printing applications.

Another highlight for the customers was the brand new **jetCURE series**. With developing these high-performance UV driers Hönle once more emphasizes their position as world market leaders in UV drying systems for large-format inkjet printing.
