Customized drying systems

UV specialist Hönle offers individual UV and UV-LED systems for inkjet printing

From 20th to 23rd April Fespa digital takes place in Munich. This is the perfect platform for UV specialist Dr. Hönle AG to present their high-end curing systems for industrial printing applications. **Since almost 40 years Hönle develops and manufactures UV systems for the printing industry.** Their curing systems are always **tailor-made to the customer's demand** and – of course – state-of-the-art. Thus, a broad spectrum of curing units has been developed in the course of the years: **It spreads from conventional UV technology over inert solutions to upcoming UV-LED technology.** To guarantee to the customers the best quality possible, key components are developed and manufactured in-house.

With the **jetCure series** world market leader Hönle gives evidence of their huge competence in UV curing at large-format inkjet printing. By reaching a **double peak-intensity** compared to similar products, jetCure systems lead to an **excellent curing result even at high web speeds**, which means a considerably improved printing quality. Due to specially developed cold light reflectors, this applies also for temperature-sensitive substrates. jetCure units are available with various lamp spectra which are **individually adapted to each printing process**. In short, jetCure units are as customized as can be!

In addition to conventional UV technology Hönle presents individual solutions in UV-LED, above all their **LED Powerline series**. These highly intensive LED-arrays come in various irradiation widths and wavelengths and can be optimally adapted to any application.

Hönle manufactures all control units for their UV and UV-LED systems in-house. This results in **customized activation options**, ideal for the curing process and ideal for the user! The possibilities range from a simple „plug & play” table-top via mounting plate to a 19“-draw for top hat rail mounting. Control and electric supply offer great design flexibility, Hönle has the right solution for every demand.

Visit the Hönle Gruppe at Fespa digital hall B2, stand 243.
